Large Clinic Prepares for the Future of Healthcare with StyleView

WISMAR, GERMANY

The Sana HANSE-Klinikum Wismar is one of the largest care clinics in Mecklenburg-Western Pomerania with 13 medical departments. When they began a multi-year initiative to prepare for a digital future, they knew they needed to start with updated, modern medical carts in the intensive care unit (ICU).

They tested and evaluated mobile medical carts from three manufacturers. That included Ergotron's StyleView 42 Medical Cart, thanks to a positive recommendation from a colleague. The team identified multiple applications for the new carts in future workflows. To meet these diverse needs, they chose the StyleView 42 Medical Cart.

“It’s beneficial when you can actually show something to the patient. You can turn the cart so that you can see while showing the patient the problem.”

— Jan Papenfuss, IT leader

All clinicians in the ICU now benefit from these mobile, ergonomic workstations. Doctors use the mobile workstations to view X-ray images and patient data, and for documentation. They’re able to easily share findings with patients by comfortably situating the mobile cart to display results on the screen. Nurses can also complete documentation on the same workstation.

IT leader Jan Papenfuss praises the many use cases for the StyleView Medical Cart and the positive impact on patient-provider relationships.

“It’s beneficial when you can actually show something to the patient,” he says. “You can turn the cart so that you can see while showing the patient the problem.”

The clinicians appreciate how easy the cart is to use and adjusts to a comfortable height for each user. The open architecture design is compatible with their own hardware, and exchanges easily, if needed. The cart also enables efficient cleaning, which supports infection prevention in this critical care unit. The extra workspace, plus compatible accessories, makes it a go-to tool.

Based on the positive feedback, the fleet will expand. The versatility allows for different areas of application in the future. They plan to use the StyleView 42 Medical Cart in labor and delivery units to comfortably move cardiotocography devices (CTG) throughout patient rooms. Telemedicine purposes are also a possibility, like wound documentation.
